PROFESSIONAL EXPERIENCE:

Project#1

Project Title: Insurance for Automobiles
Client: Esurance
Testing Type: Manual, database, and API

Description: Esurance provides insurance for automobiles. Test applications consisted of web applications for customers and internal sales agents and mobile application for customers. These online applications cater to the needs of customers insurance needs. The online platform provides various options to purchase the auto-insurance for multiple vehicles and drivers. This is built on .net, and testing included functional, database and API.

Roles and Responsibilities:

- Actively involved in all agile sprint-level activities.
- Implemented the test life cycle by preparing test cases and executing them.
- Being an active participant in daily standups and scrum meetings and providing status updates.
- Configuring and tracking test environments for software bugs
- Consult with developers on bugs status and technical concerns.

Project#2

Project Title: Drive NG migration.
Client: ARVAL
Testing Type: Manual

Description: This project is related to car rentals. In this project we are testing NG (Next generation) forms which is migrated from the version of oracle forms. These forms help customers to lease the cars. In this project we do comparison, migration testing, functional testing and executed test scenarios manually.

Roles and Responsibilities:

- Developed a **testbed** platform for rigorous, transparent, and replicable testing of scientific theories, computational tools, and new technologies.
- Participated in the **UAT testing** process and developed a test plan.
- Providing status updates during daily **standups and scrum meetings**, as well as taking part in all **agile sprint-level activities**.
